SOME DES TO SOLVE

You know how to solve first-order *separable* (section 2.2) and *linear* (section 2.3) DEs. Decide if these are separable or linear (or both or neither), and find the general solution if possible.

1.
$$\frac{dy}{dx} = 1 + x^2$$

2.
$$\frac{dy}{dx} = 1 + y^2$$

$$3. \frac{\mathrm{dy}}{\mathrm{dx}} = 1 + \mathrm{y}$$

$$4. \ \frac{dy}{dx} = 1 + xy$$

$$5. \ \frac{\mathrm{d}y}{\mathrm{d}x} = 1 + xy^2$$

6.
$$\frac{dy}{dx} = x + xy$$
